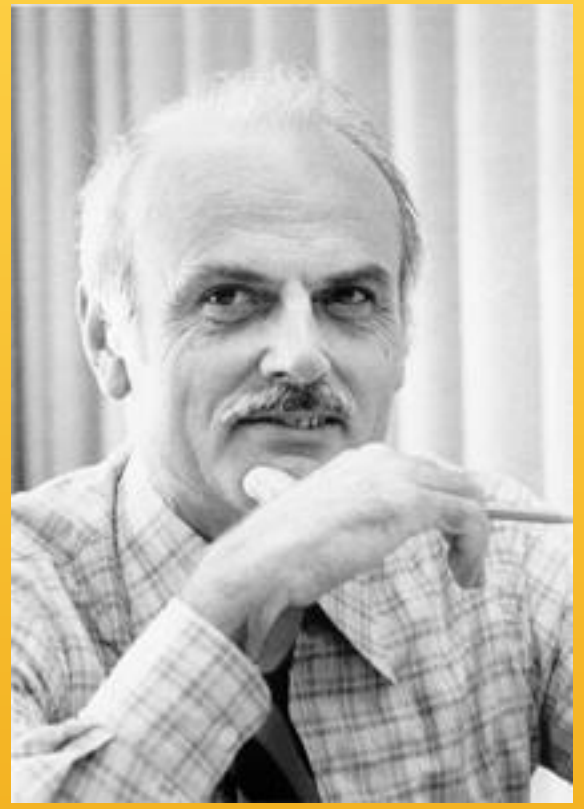
How did I get started with NoSQL databases?
TALELEARNCODE
CHADGREEN

What are Relational Databases

Relational Model



- First-order predicate logic
- Described by Edgar Codd in 1969
- Data represented in terms of tuples
- Purpose is to provide declarative method for specifying data and queries

Codd's 12 Rules

0: Foundation Rule

1: Information Rule

2: Guaranteed Access

3: Systematic treatment of NULL values

4: Active Online Catalog

5: Comprehensive data sublanguage

6: View Updating

7: Possible for high-level insert, update, and delete

8: Physical data independence

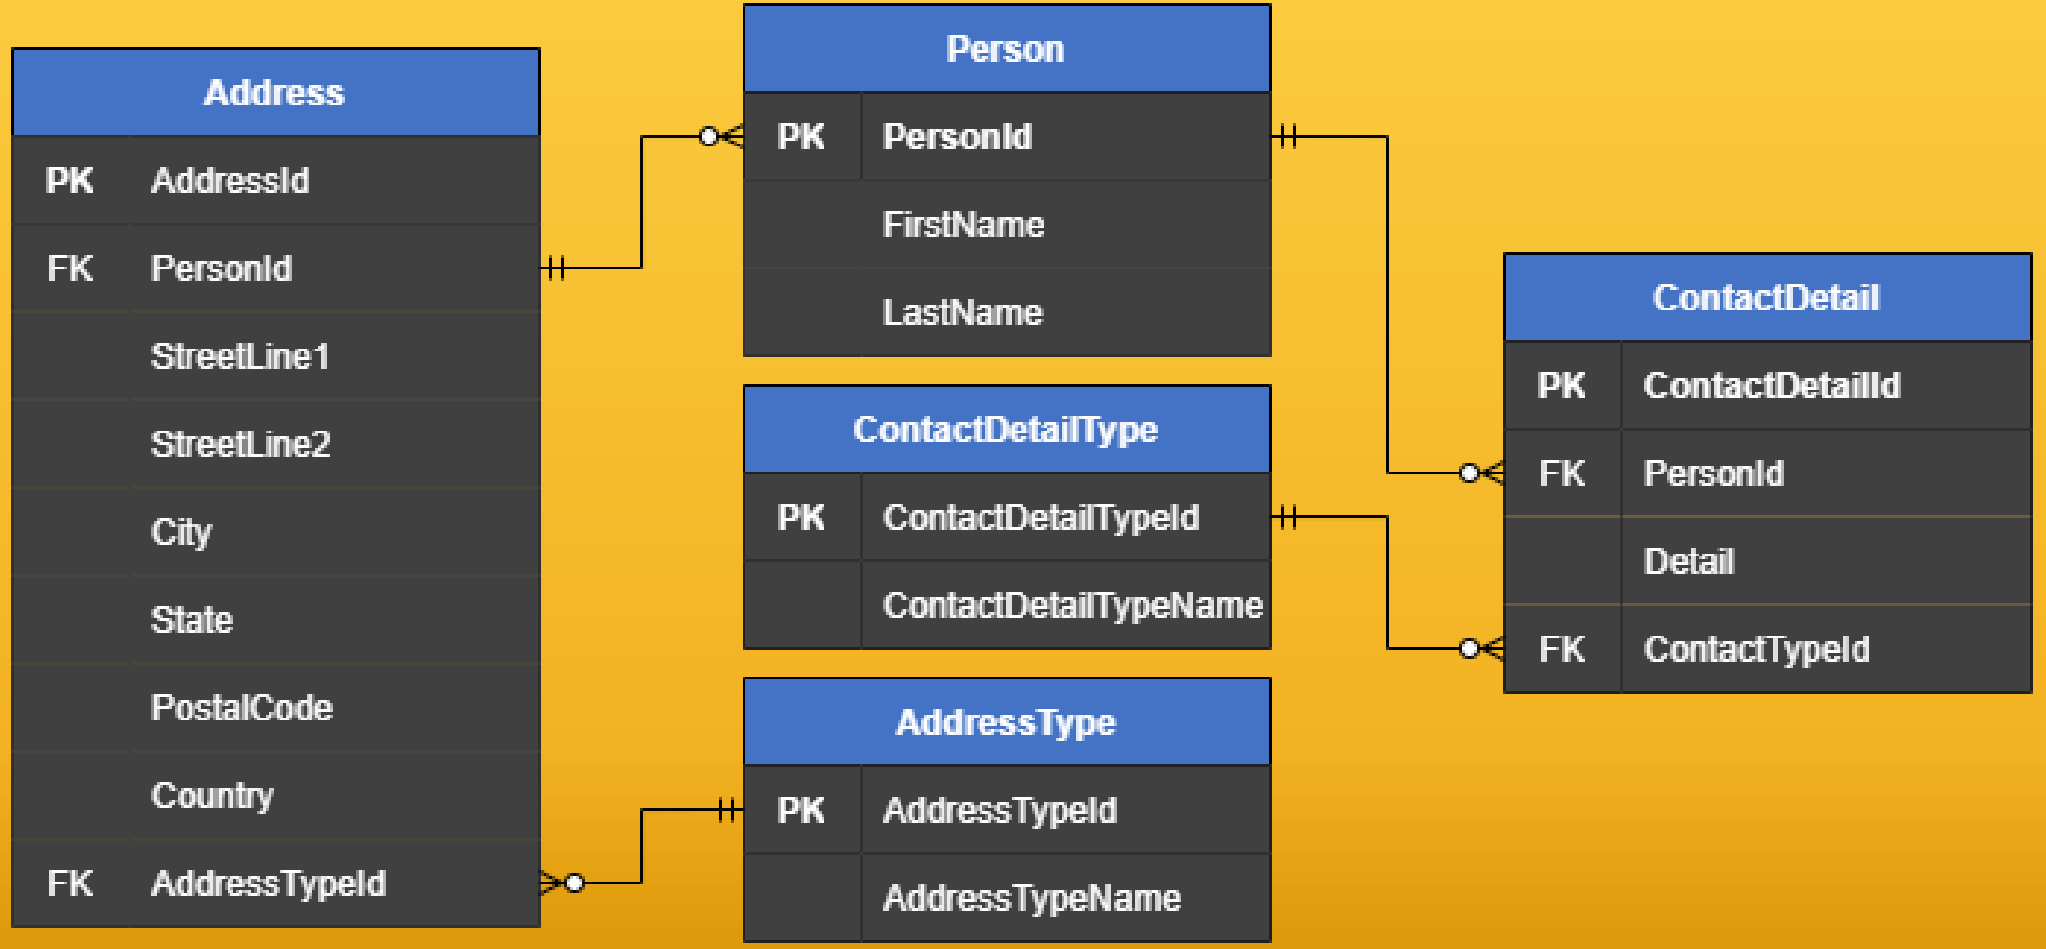
9: Logic data independence

10: Integrity Independence

11: Distribution Independence

12: Nonsubversion Rule

Typical Relational Model



True star of Relational Databases

Big Names in Relational Databases

What are NoSQL Databases

What are NoSQL Databases

Modeled in means other than tabular relations

Existed since late 1960s

Increasingly used in big data and real-time web applications

NoSQL Motivations

- Simplicity of Design
- Simpler Horizontal Scaling
- Finer Control over Availability
- Limiting Object-Relational Impedance

Availability over Consistency

Relational
ACID Transactions

NoSQL
Eventual Consistency

Eventual Consistency

Many types of NoSQL databases

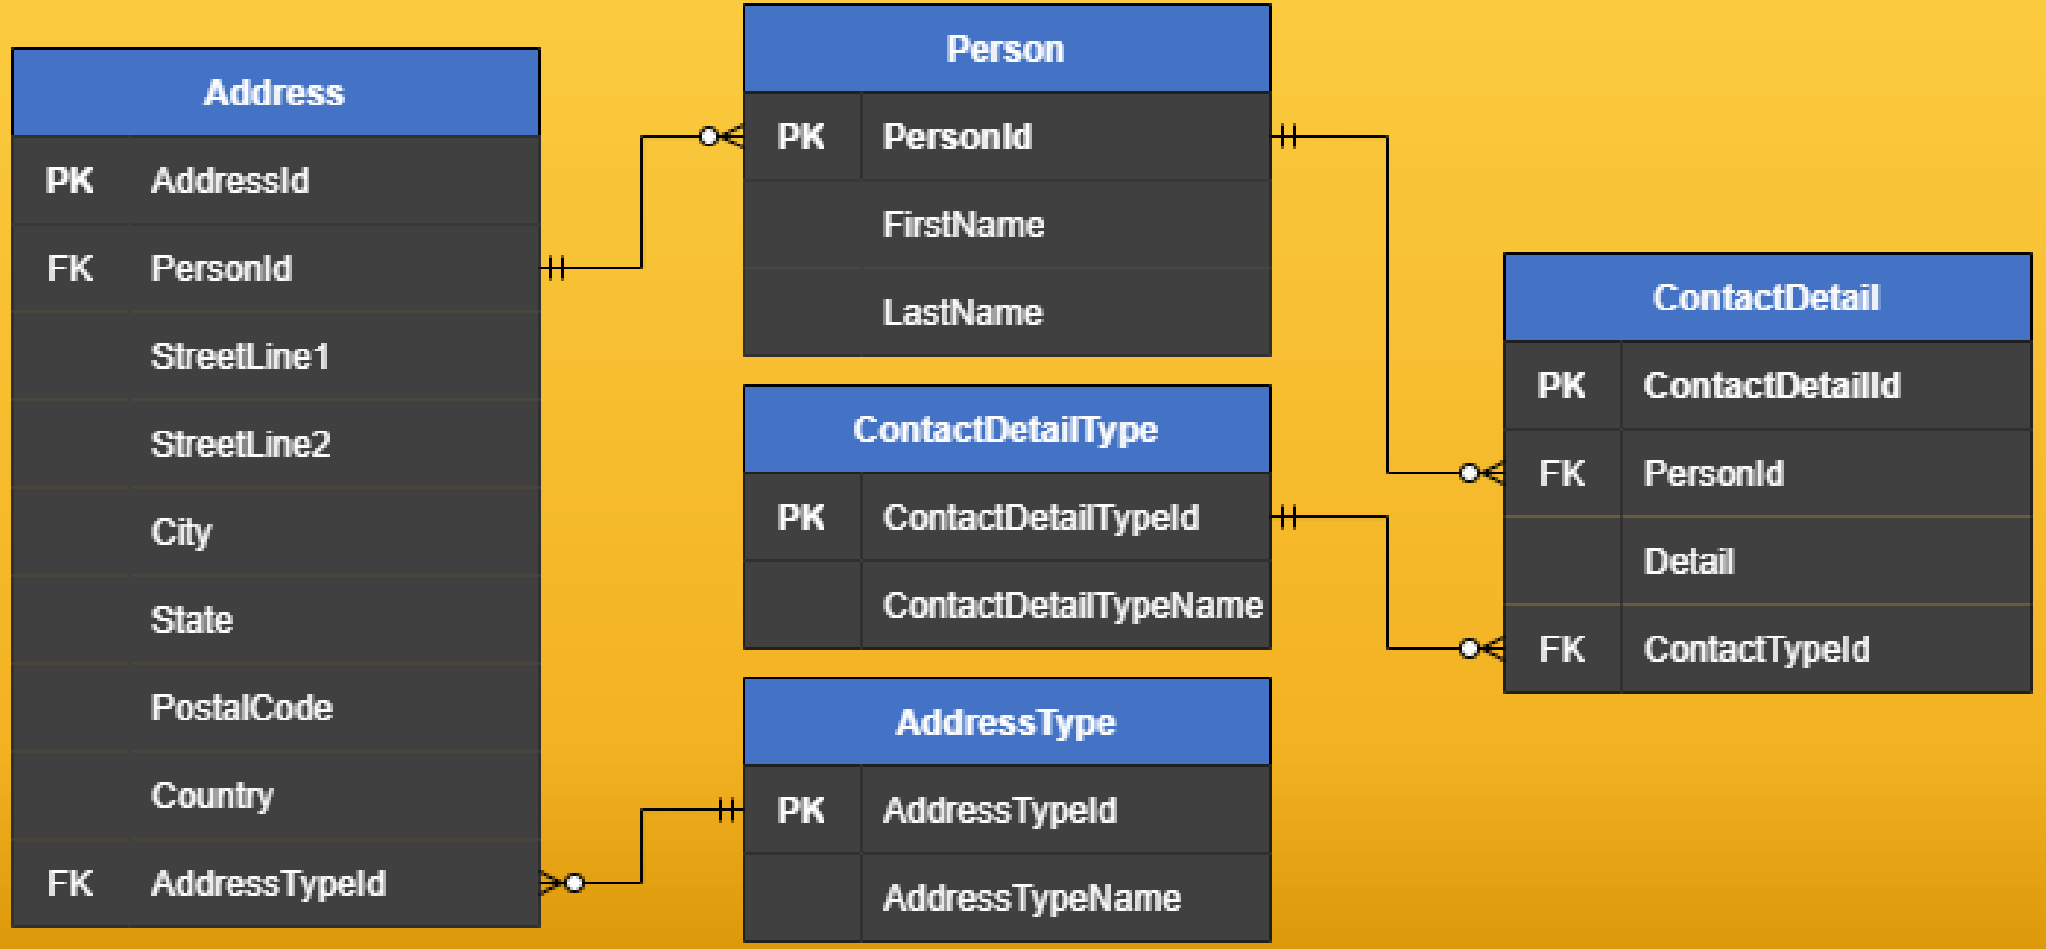
Couchbase

Document

CouchDB

ArangoDB

Typical Relational Model



Same but in a document database

```
{
 "id": "1",
 "firstName": "Thomas",
 "lastName": "Andersen",
 "addresses": [
  {
   "city": "Seattle",
   "state": "WA",
   "type": {
    "name": "Primary"
   }
  }
 ],
 "contactDetails": [
  {
   "detail": "First Detail",
   "type": {
    "name": "A detail type"
   }
  }
 ]
}
```

Many types of NoSQL databases

Key-Value

Amazon DynamoDB

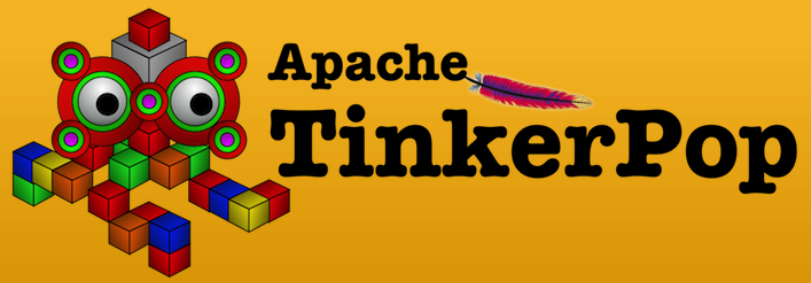
redis

Many types of NoSQL databases

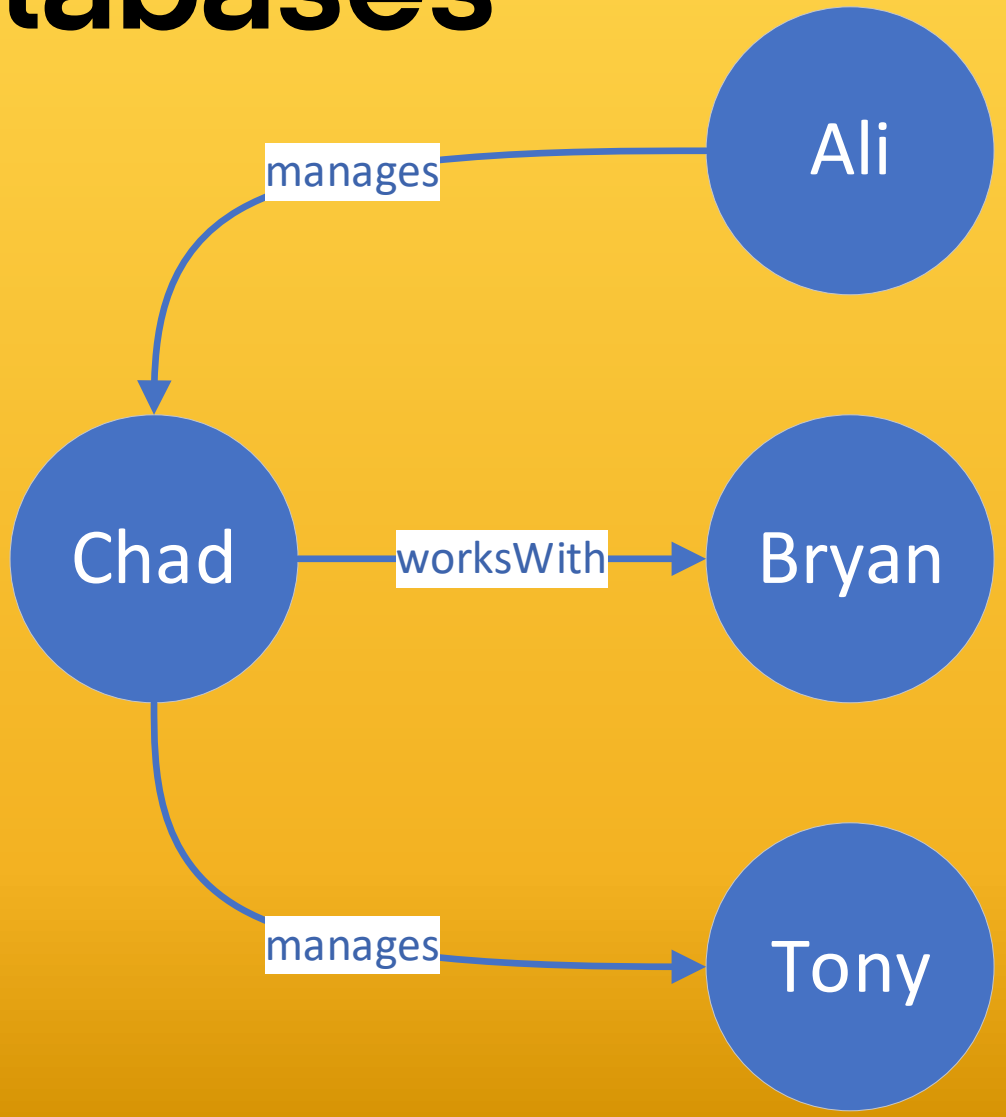
Wide Column

Many types of NoSQL databases

Graph



Graph Databases



Many types of NoSQL databases

- Document
- Key-Value
- Wide Column
- Graph
- Object
- Tabular
- Tuple Store
- Triple Store

Picking a Data Store

Data Model Comparison

Data Model	Performance	Scalability	Flexibility	Complexity	Functionality
Key-Value Store	High	High	High	None	Variable (None)
Column Store	High	High	Moderate	Low	Minimal
Document Store	High	Variable (High)	High	Low	Variable (Low)
Graph	Variable	Variable	High	High	Graph Theory
Relational	Variable	Variable	Low	Moderate	Relational Algebra

Ben Scofield – NoSQL presentation at CodeMash 2010

Things to think about

- Skillset
- Time to Market
- Known Data Structure
- Scalability

Don’t forget

Hybrid
