# **Databases**

#### **Relational Model**

- First-order predicate logic
- Described by Edgar Codd in 1969
- Data represented in terms of tuples
- Purpose is to provide declarative method for specifying data and queries

#### Codd's 12 Rules

0: Foundation Rule

1: Information Rule

2: Guaranteed Access

3: Systematic treatment of NULL values

**4: Active Online Catalog** 

5: Comprehensive data sublanguage

6: View Updating

7: Possible for high-level insert, update, and delete

8: Physical data independence

9: Logic data independence

**10: Integrity Independence** 

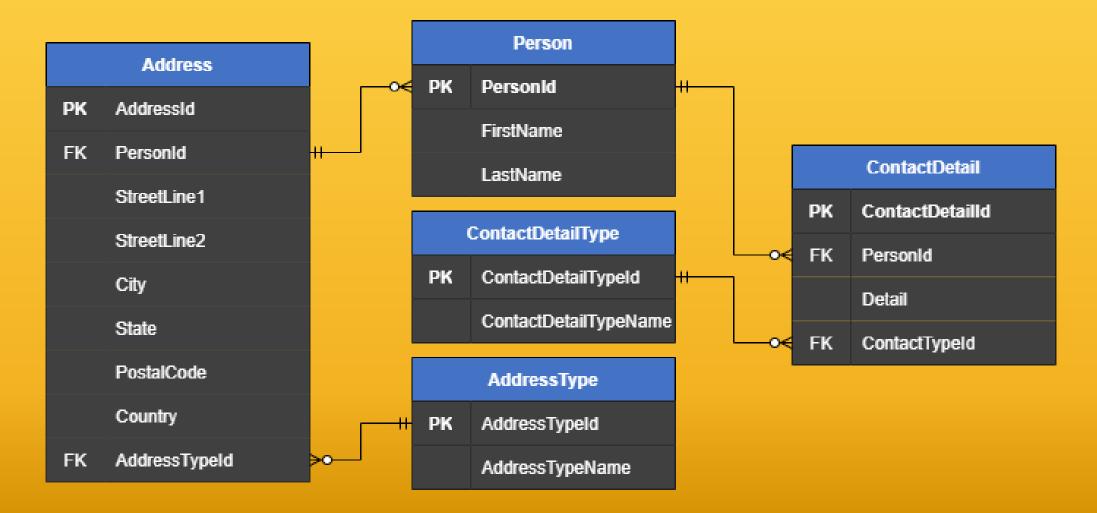

**11: Distribution Independence** 

12: Nonsubversion Rule

# **Typical Relational Model**

#### **True star of Relational Databases**

Structured Query Language SEQUEL

# Big Names in Relational Databases

# ORACLE®

#### What are NoSQL Databases

Modeled in means other than tabular relations

**Existed since late 1960s** 

Increasingly used in big data and real-time web applications

#### **NoSQL Motivations**

**Simplicity of Design** 

Simpler Horizontal Scaling

Finer Control over Availability

Limiting Object-Relational Impedance

# **Availability over Consistency**

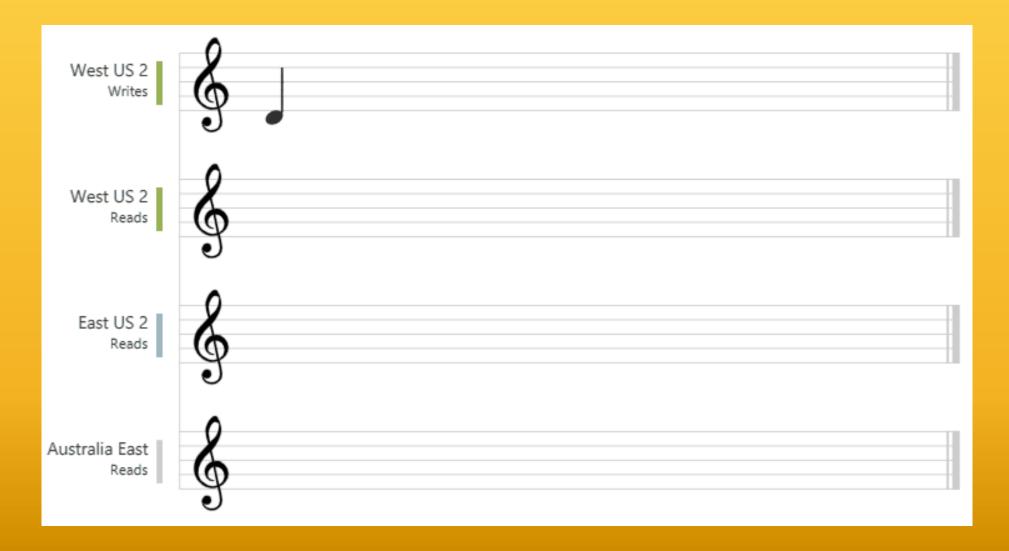

Relational ACID Transactions

NoSQL Eventual Consistency

# **Eventual Consistency**

Not only SQL

Non-SQL

Non-Relational

Not only SQL

Non-SQL

Non-Relational

Couchbase

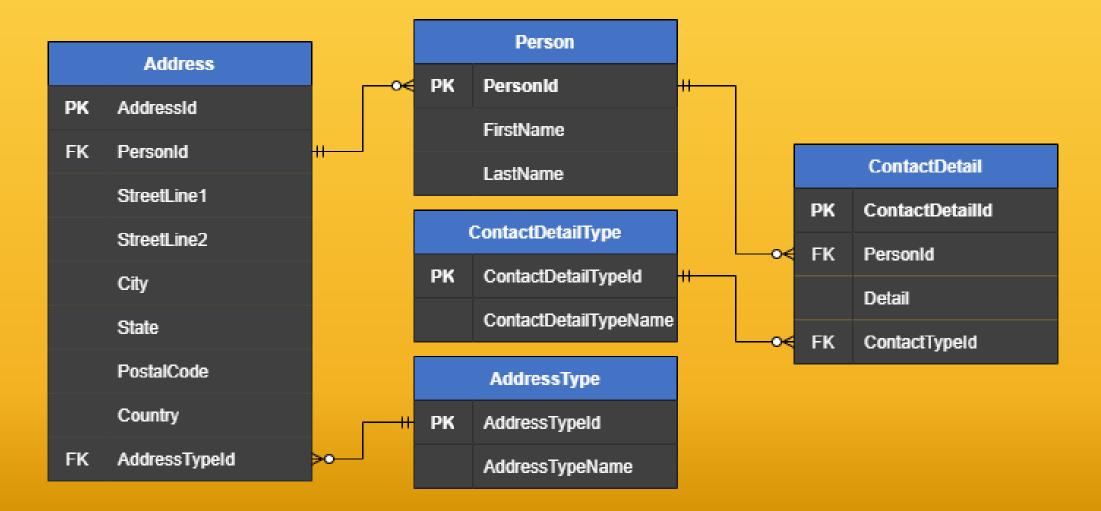

# **Typical Relational Model**

#### Same but in a document database

```
"id": "1",
"firstName": "Thomas",
"lastName": "Andersen",
"addresses": [
  "city": "Seattle",
  "state": "WA",
  "type": {
   "name": "Primary"
"contactDetails": [
  "detail": "First Detail",
  "type": {
   "name": "A detail type"
```

**Key-Value** 

**Wide Column** 

Graph

# **Graph Databases** Ali manages Chad Bryan worksWith manages Tony

**Document** 

**Key-Value** 

**Wide Column** 

Graph

**Object** 

**Tuple Store** 

**Tabular** 

**Triple Store** 

# **Data Model Comparison**

Data Model	Performance	Scalability	Flexibility	Complexity	Functionality
Key-Value Store	High	High	High	None	Variable (None)
Column Store	High	High	Moderate	Low	Minimal
Document Store	High	Variable (High)	High	Low	Variable (Low)
Graph	Variable	Variable	High	High	Graph Theory
Relational	Variable	Variable	Low	Moderate	Relational Algebra

Ben Scofield – NoSQL presentation at CodeMash 2010

## Things to think about

Skillset

**Known Data Structure** 

Time to Market

Scalability
